# Information on the premine and airdrop

Lysergion implements a small premine of 1.9% to foster development of the currency and provide the initial userbase with an opportunity to obtain a number of coins without any initial investment. 2/3rd of the premine will be distributed through an initial airdrop open to active users of Bitcointalk, Reddit, and psychedelic-related communities. Listed communities consist of the most likely of users to promote and contribute to the Lysergion project. The remaining 1/3rd will be allocated for bounties, development costs, and future giveaways. Bounties are rewards put up for those who make positive contributions to the project, typically in the form of online services utilizing Lysergion's API. Development costs include hosting and maintenance.

### How your airdrop is calculated...

The total amount allocated to the airdrop, 534,231LYS, is divided by the combined weight of all entrees, resulting in a value in LYS for one unit of weight - 1x. This value is then multiplied by your individual weight to calculate the amount awarded to you by the airdrop.
